Brian K. Fung

PharmD, MPH, CNA

Clinician-Engineer · Founder · Clinical AI, Informatics, Interoperability & Public Policy

brian@briankfung.com • Brandon, FL • briankfung.com • linkedin.com/in/briankfung • github.com/briankfung

Summary

Founder building haau3, a consumer caregiving app, and the haau3 platform, a suite of FHIR APIs that powers it and serves other healthcare organizations. Previously Staff Clinical Informatics Data Architect at Verily and an informatics pharmacist on Mayo Clinic's Epic transformation across 80 hospitals and clinics. Residency-trained pharmacist who contributed to the electronic prescribing sections of the ONC's 21st Century Cures Act Final Rule.

Education

Stanford Healthcare AI Leadership & Strategy (HAILS) — Admitted, begins May 2027
Stanford University School of Medicine — *Stanford, CA*

A hybrid Stanford executive program for healthcare leaders focused on AI innovation, implementation, and strategy.

Graduate Certificate, Biomedical Data Science — 2022 – 2023
Stanford University School of Medicine — *Stanford, CA*

Hands-on model development across machine learning, deep learning, and large language models, including training, fine-tuning, and evaluation.

Master of Public Health — 2018 – 2020
Johns Hopkins Bloomberg School of Public Health — *Baltimore, MD*

Doctor of Pharmacy — 2009 – 2013
University of Florida — *Gainesville, FL*

Bachelor of Science, Human Nutrition — 2005 – 2009
University of Florida — *Gainesville, FL*

Postgraduate Training

PGY-2 Pharmacy Informatics Resident — Jul 2014 – Jul 2015
University of Utah Health — *Salt Lake City, UT*

- Led cross-hospital medication workflow and security initiatives across seven hospitals, including an enterprise authentication transition affecting 3,500+ nurses.

PGY-1 Pharmacy Practice Resident — Jun 2013 – Jun 2014
Sarasota Memorial Health Care System — *Sarasota, FL*

- Led EHR training for a 40+ FTE pharmacy department during conversion from McKesson Horizon Meds Manager to Allscripts while maintaining clinical pharmacist responsibilities.

Licensure & Certifications

Certified Nursing Assistant (CNA) — Jan 2026 – 2028
Florida Department of Health

HL7 FHIR R4 Proficiency Certificate Apr 2024
HL7 International

HL7 FHIR Foundation Certification Apr 2024
HL7 International

Mayo Quality Fellow, Silver 2018
Mayo Clinic

Mayo Quality Fellow, Bronze 2018
Mayo Clinic

Board Certified Pharmacotherapy Specialist (BCPS) 2016 – 2023
Board of Pharmacy Specialties

Epic Certifications 2014 – 2025
Epic Systems

Willow Inpatient · Willow Inpatient Graduate · Inpatient Clinical Decision Support · Bugsy Infection Control · Reporting Workbench · BestPractice Advisories, Basic Badge · Alternatives Badge · Medication Warnings Badge · Usability Badge · Core Analyst Badge

Making a Difference in Infectious Disease Pharmacotherapy (MAD-ID) 2014

Pharmacist Licensure 2013 – Present

Minnesota · Utah · Florida

Academic Appointments

Clinical Assistant Professor Sep 2016 – Present
University of Florida College of Pharmacy *Gainesville, FL*

Instructor of Pharmacy 2019 – 2022
Mayo Clinic College of Medicine and Science *Rochester, MN*

Professional Experience

Founder Nov 2025 – Present
haau3 *Brandon, FL*

Consumer caregiving app and the B2B healthcare API platform behind it, started during a period of full-time family caregiving.

- Conceived and built haau3, a FHIR-native app that gathers a loved one's health records in one place, explains them in plain language, and shares exactly what the caregiver chooses with care teams.
- Took haau3 to general availability in the CMS Health Tech Ecosystem for both the Conversational AI and Kill the Clipboard use cases, recognized by CMS at the program's first-anniversary event in July 2026, and listed it in the CMS Medicare App Library; earned the DiMe Seal in April 2026.
- Shipped Kill the Clipboard sharing, which sends a curated record summary to a provider as an encrypted SMART Health Link or QR code, drawing on records retrieved through a partner connected to TEFCA and a CMS Aligned Network.
- Built an early SMART Health Check-in flow in which a provider's check-in page asks haau3 for records and forms before a visit, extending Kill the Clipboard from sharing into intake.
- Launched the haau3 platform in preview with a free developer plan: six FHIR APIs that power haau3 and are open to other builders, covering scheduling, terminology, provider directory, questionnaires, medication reconciliation, and Medicare Advantage and ACA plan benefits.

- Built the Scheduling API as a slot aggregator for HL7 SMART Scheduling Links and the Plan Benefits API from the plan files CMS publishes, the capabilities behind haau3's CMS Early Adopter pledges for Modern Scheduling and Real-Time Benefits.
- Designed the platform contract-first, with API-key authentication, an interactive reference generated from its contracts, and services built on public sources: the CMS National Provider Directory, CMS plan files, LOINC, and a pinned RxNorm release.
- Evolved medlistIQ into the platform's MedList API, which turns one patient's medication records into a single reconciled FHIR medication list with the source records behind every entry.
- Authored the haau3 FHIR Implementation Guide on US Core 6.1.0 and SDC 4.0.0, defining 39 profiles, 16 extensions, 3 operations, and 40 code systems and value sets behind the app and platform.
- Built Cora, haau3's English and Spanish text and voice assistant on Google Gemini under a HIPAA business associate agreement, grounded in a person's own records and vetted public reference material and storing no conversations; moved its UX from text to speech-to-speech on caregiver feedback.
- Designed Cora's Smart 40 evaluation: 40 scripted scenarios in text and voice, English and Spanish, run as hash-chained sealed runs and reviewed by a person against a pass bar set in advance; the latest run passed 39 of 40 with zero confirmed hard failures.

Founder & AI Product Lead Jun 2025 – Present

Brian K. Fung Media LLC *Brandon, FL*

Parent company of haau3, and home to independent products and advisory work. Part-time alongside full-time caregiving until January 2026.

- Launched Unscripted Rx from 0-to-1 in August 2025 as a modern pharmacy residency directory on a knowledge graph of 30,000+ connected entities, including 3,000+ programs and 1,700+ organizations, with a ranked shortlist, crowd rankings, and claimable person pages.
- Grew Unscripted Rx organically to 36,000+ people and 80,000+ pages read in the twelve months to August 2026, with top-10 Google search visibility, weekly-refreshed stipend benchmarks by program type and state, and NAPLEX pass-rate comparisons by school.
- Built the Unscripted Rx organization side: free page claiming checked by a person, a recruiting events calendar listing 259 events across 80 organizations, program analytics, and a Standard plan adding event registration, reminders, and attendance lists.
- Built Ovant, a job search tool open to everyone: candidates talk or type about each role once, then get a resume written for any job they paste, an application tracker, the terms their saved postings reward, and warm-intro paths.
- Advise CEOs, CTOs, CPOs, and product and engineering leaders on AI-enabled product strategy, platform architecture, and EHR-integrated workflows.

Full-time Family Caregiver Mar 2025 – Jan 2026

Career break *Brandon, FL*

Took family medical leave from Verily in March 2025, then left in June to care full-time for a grandparent at home.

- Trained as a nursing assistant and became a Florida Certified Nursing Assistant in January 2026 to provide hands-on care at home.

Staff Clinical Informatics Data Architect Sep 2024 – Jun 2025

Verily *Fairfax, VA*

Promoted to Staff after earning the top company performance rating (5 of 5) in the preceding review cycle; rated significantly above expectations in three of six cycles overall and recognized with a 2024 Verily Values Award.

- Directed enterprise FHIR governance as an appointed member of Verily's FHIR Council, defining 200+ implementation guidance artifacts, semantic models, review patterns, and developer tooling, and leading a company-wide proposal for FHIR proficiency assessments.
- Designed evaluation frameworks comparing deterministic clinical reasoning with frontier LLM approaches for AI-assisted type 2 diabetes decision support, clarifying accuracy, explainability, safety, and implementation tradeoffs to guide Verily's clinical AI strategy.
- Shaped strategic direction for EHR integration through SMART on FHIR, pharmacy management, and externalization of Verily's care platforms, translating digitized care pathways into requirements for productized platform APIs.
- Launched Verily's first medical-coding enrichment modules, standardizing procedure (HCPCS) and immunization coding across products, by building a FHIR terminology service that combined BigQuery with a FHIR proxy to an enterprise terminology-management platform, alongside FHIR terminology data-quality measures.
- Led harmonization and enrichment of third-party health information exchange data, turning an ambiguous company initiative into a scoped delivery roadmap by mapping C-CDA-to-FHIR transformation complexity and educating cross-functional teams on the tradeoffs.
- Advanced a new market opportunity with a value-based care provider by digitizing its clinical care pathways, mapping concepts to FHIR value sets and configuring executable BPM+ models, starting with heart failure and expanding to additional pathways.
- Delivered the medical-device shipment backend within Verily's device-integration initiative, extending a unified device data model across first- and third-party devices in support of connected-care programs.
- Influenced engineering and product practice through internal publications on EHR integration, Epic data models, device data models, FHIRPath and CQL, and applications of LLMs, establishing shared collaboration channels between informatics and partner teams.

Senior Clinical Informatics Data Architect Apr 2022 – Sep 2024

Verily *Fairfax, VA*

Partnered across product, engineering, UX, research, clinical, legal, and privacy teams to translate ambiguous user and clinical needs into implementation-ready architecture, earning 10+ cross-team peer bonuses and mentoring pharmacy informatics interns and early-career engineers.

- Drove the Q1 2024 launch of Lightpath for type 1 diabetes with Highmark, earning a director spot bonus and an engineering peer bonus, by resolving launch-critical issues and automating device fulfillment from CRM through FHIR to BigQuery.
- Led semantic and workflow architecture using BPM+ and FHIR, producing 100+ CMMN, BPMN, DMN, and data artifacts that connected user journeys and clinical logic to APIs, decisions, and data contracts across all care teams.
- Shipped the clinical content behind the Verily Value Suite MVP, a flagship 2022 launch, by modeling 140+ Mayo Clinic heart-failure (HFrEF) pathway concepts into executable decision models and authoring the company's BPM+ modeling style guide.
- Established Verily's enterprise terminology-management capability by leading vendor analysis and selection of a clinical terminology and content-management platform, co-leading its implementation, and launching terminology extracts into BigQuery.
- Scaled care-pathway authoring beyond the informatics team by enlisting 20+ clinical data managers as authors, fully automating QA/QC of new models with a CI/CD pipeline, and creating FHIR and BPM+ curricula, including 14 tutorial videos among the company's most-viewed internal documentation.

- Standardized race and ethnicity data capture across Verily against federal standards and contributed key designs for laboratory results and error handling, care surveys, and professional task workflows adopted by all care teams.
- Partnered with data science teams throughout as the clinical and informatics subject-matter expert to build, train, and evaluate machine-learning and deep-learning applications across care programs, shaping training data, clinical validity, and FHIR-aligned model outputs.
- Designed Onduo's medication-review pipeline with data science and engineering, authoring the specification mapping model outputs to FHIR and proposing therapeutic-class-to-NDC eligibility mappings using a commercial drug compendium, aligned to ADA 2023 guidelines.
- Prototyped executable DMN and BPMN clinical decision models, spanning cardiac assessment, KCCQ-12 scoring, and an end-to-end CMS Enhanced Oncology Model flow, that guided Verily's strategic selection of care-pathway tooling.
- Organized and mapped 145 clinical concepts from the Mayo care-pathway program to UMLS, controlled vocabularies, and HL7 FHIR within the first months of joining, reconciling Mayo's existing decision models to eliminate duplicated mapping work.
- Served as Verily's pharmacist subject-matter expert for medications, pharmacy, and clinical workflows, consulting across product areas and delivering pharmacy cost-savings analyses, including IV-to-PO conversion opportunities for cardiac surgery populations.

Clinical Informatics Pharmacist Jul 2015 – Apr 2022

Mayo Clinic *Rochester, MN*

- Led end-to-end product and workflow transformation across four Epic module implementations, covering antimicrobial stewardship, infection control, clinical decision support, and Willow pharmacy, spanning 80 hospitals and clinics within a $1.5B enterprise program, from discovery and requirements through validation, training, rollout, and iteration.
- Modernized a 25+ year rules-based antimicrobial monitoring platform, converting 75+ custom legacy rules from CBAM and TheraDoc into Epic through 2.5 years of system discovery, workflow redesign, decision-support configuration, testing, and production deployment.
- Built NHSN regulatory reporting for CAUTI, CLABSI, SSI, VAE, and LabID events, plus internal surveillance reporting for bloodstream infections, carbapenem-resistant organisms, and multidrug-resistant organisms, with a distribution strategy designed for low ongoing maintenance.
- Designed physician-facing reminder alerts for catheter-associated urinary tract infection, central line-associated bloodstream infection, and umbilical catheters, and coordinated the enterprise prevention workflows behind them.
- Enabled bidirectional laboratory interoperability between Mayo's SOFT laboratory system and two of the largest external reference labs, Quest Diagnostics and Labcorp, integrating 10,000+ external microbiology records by mapping laboratory tests, organisms, and susceptibilities with LOINC and SNOMED CT.
- Converged an enterprise list of indications for all systemic antimicrobials and built them into Epic, alongside restricted medication workflows using alternatives, order questions, best practice advisories, and scoring.

Graduate Student Intern Jun 2019 – May 2020

Office of the National Coordinator for Health IT *Washington, DC*

MPH practicum and capstone placement, concurrent with Mayo Clinic. Practicum supervisor: Debbie Bucci. Capstone advisor: Thomas Mason, MD.

- Assisted in drafting the electronic prescribing sections for the ONC's Cures Act Final Rule, fulfilling provisions of the 21st Century Cures Act.
- Assisted in summarizing public comments on the ONC's Cures Act proposed rule during the notice of proposed rulemaking for electronic prescribing.
- Analyzed the implications of the 21st Century Cures Act on clinician burden attributable to health information technology and electronic health records, work that became the MPH capstone.
- Coordinated a one-day national stakeholder symposium on patient matching for prescription drug monitoring programs.

Pharmacy Intern Jun 2011 – Aug 2011

Malcom Randall Veterans Affairs Medical Center *Gainesville, FL*

Pharmacy Intern Jun 2010 – Aug 2010

Walgreens *Boynton Beach, FL*

Teaching

Founder and Instructor 2023 – Present

OpenClinTech

Nine self-paced courses and 137 lessons on AI, APIs, interoperability, and software development for clinicians entering engineering, now extended with live cohort instruction.

Guest Lecturer — ENP 109, Medical Fundamentals 2022 – Present
Tufts University, Engineering Psychology and Human Factors Engineering

Guest Lecturer — ME 250.778, Implementing Fast Healthcare Interoperability Resources Feb 2026, Feb 2025
Johns Hopkins University School of Medicine

Guest Lecturer — ME 250.955, Applied Clinical Informatics Mar 2025
Johns Hopkins University School of Medicine

Preceptor, Clinical Informatics Rotation at Verily 2024 – 2025
PGY-2 Pharmacy Informatics Residents, Johns Hopkins Hospital

Preceptor, Clinical Informatics Capstone at Verily 2024 – 2025
Health Informatics MS Students, University of New England

Guest Lecturer — HLTH_SCI 365-DL, Data Management and Analytics in Healthcare Nov 2024
Northwestern University, Health Sciences

Guest Lecturer — DME100, Essentials of Clinical Data Management and Electronic Data Capture Nov 2024
Seneca Polytechnic

Guest Lecturer — PCS 8040, Pharmacy Management Sep 2022
High Point University, Fred Wilson School of Pharmacy

Guest Lecturer — PHR 8120, Information Systems for Health System Pharmacy Mar 2018
The Ohio State University Wexner Medical Center

Professional Service & Leadership

Pledgee Jan 2026 – Present
CMS Health Tech Ecosystem
Pledged the Kill the Clipboard and Conversational AI use cases, both of which reached general availability, and joined the new Modern Scheduling and Real-Time Benefits use cases as an early adopter.

Panelist, Pharmacy Forecast 2019 – Present
ASHP Foundation

Task Force Member, Policy and Advocacy Workstream 2023 – 2025
American Medical Informatics Association 25x5 Task Force

Committee Member, Value Sets 2022 – 2025
Pharmacy HIT Collaborative

Research Mentor, Computer Science Mentorship Program 2023
Google

Committee Member, Social Media 2018 – 2020
Society of Infectious Diseases Pharmacists

Member, Section Advisory Group for Pharmacy Informatics and Technology on Professional Development 2016 – 2020
American Society of Health-System Pharmacists

Lead Author, FHIR Implementation Guide
HL7 SMART Scheduling Links
Workgroup contributor. Translated multi-organization scheduling workflows into a balloted FHIR implementation guide with examples and developer-facing artifacts.

Professional Memberships

American Medical Informatics Association 2016 – 2025

American Society of Health-System Pharmacists 2011 – 2024

Minnesota Society of Health-System Pharmacists 2015 – 2020

Clinical Pharmacogenetics Implementation Consortium 2015 – 2020

Society of Infectious Diseases Pharmacists 2013 – 2020

American Pharmacists Association

Academy of Managed Care Pharmacy

Kappa Psi Pharmaceutical Fraternity

Honors & Awards

General Availability Recognition, Health Tech Ecosystem Jul 2026
Centers for Medicare & Medicaid Services
Awarded to haau3 for reaching general availability as a patient-facing app in the Conversational AI and Kill the Clipboard categories.

Early Adopter Recognition, Health Tech Ecosystem Jul 2026
Centers for Medicare & Medicaid Services
Awarded for pledging two new use cases, Modern Scheduling and Real-Time Benefits.

Verily Values Award, Respect Individuals Dec 2024
Verily

LinkedIn Top Voice Nov 2022
LinkedIn

Top 15 Healthcare Creators Jan 2022
LinkedIn

Creator Accelerator Program Jan 2022
LinkedIn
Inaugural cohort, one of 100 creators selected.

Dean's List 2009 – 2013
University of Florida College of Pharmacy

Phi Kappa Phi Honor Society Dec 2012

Rho Chi Honor Society Feb 2011
The Rho Chi Society

Projects & Product Portfolio

Ovant

Jul 2026 – Present

Job search tool, open to everyone, that builds a knowledge base of a candidate's career from an imported resume and what they say or type about each role, then writes a resume for any job they paste, tracks applications, ranks the terms their saved postings reward, and finds warm-intro paths.

Next.js · TypeScript · Postgres · Anthropic API

CV Web App

Jul 2026 – Present

Open-source CV pipeline that renders one typed data source as both an indexable website and a LaTeX-typeset PDF, published as a reference implementation others can fork.

Next.js · TypeScript · LaTeX · Vercel

haau3 platform

Jun 2026 – Present

Healthcare API platform, in preview with a free developer plan, that powers haau3 and is open to other builders: six FHIR APIs for scheduling (HL7 SMART Scheduling Links), terminology, provider directory, questionnaires, medication reconciliation, and Medicare Advantage and ACA plan benefits.

FHIR · SMART Scheduling Links · LOINC · RxNorm · OpenAPI · TypeScript

haau3 FHIR Implementation Guide

May 2026 – Present

Component of haau3 platform

FHIR implementation guide on US Core 6.1.0 and SDC 4.0.0 defining the profiles, extensions, operations, and terminology behind the haau3 app and platform.

FHIR · US Core · SDC · FHIR Shorthand

haau3

Nov 2025 – Present

FHIR-native, AI-powered care management that unifies longitudinal health records so caregivers can focus on the human side of care. Generally available and listed in the CMS Medicare App Library.

Next.js · TypeScript · FHIR · GCP

Cora

Nov 2025 – Present

Component of haau3

English and Spanish text and voice assistant that explains a person's own health records in plain language, grounded in vetted public reference material. Evaluated with the Smart 40 suite.

Gemini Live · RAG · TypeScript

Unscripted Rx

Aug 2025 – Present

Modern pharmacy residency directory and recruiting events platform on a knowledge graph of 30,000+ connected entities, including 3,000+ programs and 1,700+ organizations.

Next.js · TypeScript · Vercel

NPI Directory

Apr 2025 – Present

Lookup for clinicians by National Provider Identifier or name, exposed both as an interactive frontend and as a FHIR terminology service $lookup endpoint.

TypeScript · FHIR

OpenClinTech

2023 – Present

Open and accessible initiative training the next generation of clinician engineers.

medlistIQ

Apr 2026 – May 2026

API that embeds informatics pharmacist expertise to turn messy, multi-source FHIR medication data into a clean, inferred medication list. Evolved into the haau3 platform's MedList API.

FHIR · RxNorm · TypeScript

Technology-Enabled Chronic Care

Dec 2025

Cardio-kidney-metabolic care using FHIR, CDS Hooks, and programmatic terminology services, aligned with CMS ACCESS and FDA TEMPO.

FHIR · CDS Hooks

Public FHIR Server

Dec 2025

TypeScript and Postgres implementation of core FHIR R4 resource operations, deployed publicly for learning and reference.

TypeScript · Neon Postgres · Vercel

@briankfung/fhir-types

Dec 2025

Hand-rolled FHIR R4 TypeScript types published as a public npm package.

TypeScript

Healthcare Terminology Server

Apr 2025

Web application for clinicians and informaticists to run terminology server operations in a modern UI, covering RxNorm, SNOMED CT, NPI, and LOINC.

TypeScript · SNOMED CT · LOINC · RxNorm

PubMed AI

2024

Retrieval-augmented literature search and summarization over the PubMed corpus, answering a question with cited sources.

Python · RAG

Cardiac 3D Reconstruction

Jun 2023

Python imaging project exploring methods for 3D reconstruction of the heart from 3D echocardiography images to predict ejection fraction.

Python

Skills
